

# Bathe in a sea of free energy

Enjoy green, renewable energy with solar collectors connected to a solar ready 'CAT' cylinder

## Save up to 70% of your annual fuel bill

Our range of versatile thermal store 'CAT' cylinders are designed to incorporate energy efficient and zero carbon technologies. All Chelmer cylinders come solar ready so that this cost effective, renewable energy source can be easily integrated into your home. Each cylinder has a pre-fitted solar coil which is designed to direct solar energy straight into the underfloor heating buffer which ensures you maximise the capabilities and efficiency of this free energy source.

## Greater choice and flexibility

For the ultimate in adaptability, Chelmer offer a range of solar panels; including flat panels and evacuated tubes. They come in a variety of sizes to suit the individual needs of your property. Flat panels are ideally suited for south facing locations and can be installed 'in roof' or 'on roof' or in another suitable location. We are now also able to mount panels horizontally where appropriate. For maximum solar gain and for properties that require more positioning flexibility we would recommend evacuated tubes as they can collect energy from a greater angle and are more efficient in winter months.

Evacuated Tube

Flat Panels

### Benefits

- Lower fuel bills
- Smaller carbon footprint
- Perfect for underfloor heating
- Easy integration with a 'CAT' cylinder
- Reduced payback times

### Features

- Tube or panel collectors available
- Systems sized to suit demand
- Suitable for a variety of roof types
- 'In' or 'On' roof mounting options
- Simple to use digital controller
- Low maintenance
